2. PROJECT BACKGROUND AND OBJECTIVE

The Localisation Support Fund NPC (LSF) was incorporated in South Africa with a mandate to promote strategic localisation initiatives in the manufacturing sector and key value chains. The LSF partners with both demand and supply side stakeholders with an objective to unblock and unlock localisation by providing industry research and deploying technical expertise. The LSF's aim is to enable industrial development with a focus on manufacturing competitiveness. The key success metric for the LSF would be the reduction of South Africa's import bill and growth of manufacturing revenue and capacity.

The LSF received a request from Karma Clothing (Karma) for assistance with capacity improvements at its manufacturing factory in Wynberg, Johannesburg. Karma has experienced a surge in demand that currently exceeds its available capacity and a 25% increase in current peak capacity is required to meet existing demand.

Karma has developed a stable and sustainable in-house garment manufacturing capability for the corporate wear sector and has integrated this manufacturing capability with an automated design platform.

3. TERMS OF REFERENCE

The objective of this project will be to support Karma to scale-up capacity and to optimise the production line in order to increase its current output.

The scope of work for the planned intervention shall be as follows:

- Assess the current as-is production processes and identify the following:
 - current bottlenecks;
 - areas of improvement; and
 - opportunities to increase efficiencies and output to reach the desired target of a 25% increase in current capacity.
- Collaborate with Karma, after deep familiarization with the manufacturing process and line, to improve and implement Industrial Engineering activities and interventions on a sustainable path to ensure increased output of at least 25%.
- Develop strategies and ensure that the improved processes meet the existing requirements in terms of product quality, throughput, cost and turnaround times.
- Implement updated efficient workflow systems to optimize resource allocation.
- Advise Karma on the latest technological advancements and solutions that can be adapted to the specific needs of the current operations.
- Identify opportunities for training and skills capacitation relevant to Karma's operations.
- Advise Karma on any other improvements.

The main outcome to be achieved is an increase in the annual production capacity of Karma by 25% in order to meet increased demand.
